Assessment Part Two

The URL (web address) of my deployed site

file:///C:/Users/qnela/OneDrive/Desktop/set08801/label/Assessment_2/index.html

This URL was chosen as a way of connecting my file to GitHub desktop which will allow me to push straight to GitHub repository. But in order to do so, a file had to be created on my desktop. I experienced some difficulties while trying to create an assessment folder within my document folder. Since I have already created the folder on desktop which allowed me to push all my actives to GitHub desktop.

Initial plan outlined in part #1 and final implementation.

During the website building process, the acronym PLAN was used;

- **Prepare- Set your goals, target your visitors and website aspirations**
- **Landscaping: How would you like your website to perform-the layout**
- **Aesthetics: What color schemes will be chosen for your site-its looks**
- **Navigation: What will be the quickest and easiest way for your visitor to browse through your website**

When developing my website, some changes were made from the original plan that was set up. The foundation was still there, preparation was set, landscaping was outlined, aesthetics was chosen and implementing the best and easiest way for visitors to find what interest them were all set in place.

Instead of having my included feature, which was to be placed with the Products, I thought it would be easier to click on the product which will send the visitors directly to each product being offered. However, clicking on one product will send the visitors to that product giving a brief description on how it is made and a few ingredience used.

Social Media Tabs were taken out because the company has not yet been placed online. Another change that was made was the ability to place one's order online where it could have been picked up or delivered, only walk in is available at this time. Two tags were placed at the top left-hand corner of the page to give visitors the option to increase or decrease the font size if viewing is a bit unclear.

Features that I would add or improve to enhance my project, if given more time.

If given more time I would definitely add a photo gallery page with pictures to give customers more visuals. Another feature would be to implement a drop-down menu bar.

Two pictures on the home page would have been a plus pushing the text to the left of each page, once again I came across some difficulties placing them the way needed. It would have been interesting to have my "Home", "About Us", "Product" and "Contact Us" tags highlighted or change color when hover overed, while the font style changes. A long white line drawn below them would have made the appearance a little more sophisticated, which is what I was hoping for.

Another feature that would have been interested, would be the text in footer running across each page which I would believe will enhance the appearance.

Challenged faced and achievements made during this assignment.

Developing my website brought about some challenges that I am hoping to correct in the near future along with practice. One of the things which I was trying to accomplish was have the "Products" on a slide show, so that when clicked on each picture would screen across the page with a twenty second interval for each, giving the visitor time to read the description of each. So instead, I had to give it the function of clicking each one opening it up on another page, which was a bit disappointing. I was hoping to create that feature using JavaScript but unfortunately was unsuccessful.

Another challenged faced is where I was unable to brighten up the ambiance of my "Home" page, by placing pictures alone the top right-hand corner of the page, which I know would have lifted it up. The logo was giving a little trouble to centered have two tags on each side. When finally achieved, it was difficult to place "Est 2023" at the center below the logo, hence the reason for its present location.

I feel accomplished just to be able to see my website functioning, with the ability to view the basic demonstrations provided. It might not have all the features that I would like to apply, but that will come in the near future. I enjoyed playing around with the products layout, viewing the end result. It was a bit challenging getting them where I wanted them to be but I think the end result was well achieved.
